# Fahim Uddin

**Cell:** 347-698-5455
**Email:** fahimuddinbd@gmail.com
**Status:** US Citizen

## Professional Summary

- **Oracle Database Certified Professional for 10g,11g,12c, 19c,23ai and Redhat Linux certified engineer.**
- **MYSQL 8.0 Database admin professional.**
- **AWS Certified Solutions Architect – Associate**
- **15+ years** of experience as an **Oracle Database Administrator** on AIX, SUN, Redhat Linux and Windows operating systems with a track record in various Databases environments.
- Managed 70+ EXADATA cluster
- Managed oracle 9i, 10g, 11g, 12c, 18c, 19c,23ai RAC in production, Development, and non-productionenvironments.
- Experience in Managed oracle databases in **Amazon cloud** (AWS RDS, EC2, DMS, Redshift, S3)
- Hands-on experience Managed MySQL and PostgreSQL databases across AWS RDS, Amazon Aurora (MySQL/Postgres), EC2-hosted databases, and on-prem environments.
- Performed major and minor version upgrades for MySQL and PostgreSQL with minimal downtime, including pre-upgrade compatibility checks, parameter tuning, and post-upgrade validation.
- Led and supported database migrations between on-prem to AWS, EC2 to RDS/Aurora, and cross-engine migrations using native replication, DMS, logical replication, and dump/restore strategies.
- Designed and maintained high availability and disaster recovery setups using multi-AZ, read replicas, binlog replication, WAL streaming, and automated backups.
- Optimized database performance through query tuning, index optimization, execution plan analysis, and parameter group tuning for production workloads.
- Managed schema changes and data type migrations (e.g., INT → BIGINT) across large, high-volume tables in both staging and production environments.
- Implemented monitoring and alerting using CloudWatch, Performance Insights, slow query logs, and custom dashboards to proactively detect and resolve issues.
- Experience in migrating 100's of MySQL databases from on-prem to AWS cloud. (aurora global cluster)
- Experience in Managed **snowflakes** and **Redshift.**
- Experience in Managed **MySQL** databases both on-prem and AWS environments.
- Experience in creating **MySQL** databases replication between aurora and ec2 across AWS account.
- Experiences in database migration from **on-prem to cloud** environments using AWS DMS
- Managed Oracle 12c **Goldengate** (both active-active and active passive).
- Experience in Managed database pipelines using Liquibase.
- Designed and build multiple physical and logical Standby databases (datagurad) both RAC and standalone environments.
- Working experiences in **patching**, **upgrading** and **cloning** Oracle Databases.
- Experiences on Oracle TDE master wallet encryption to secure financial data.
- Performed **RMAN backups, restores, cloning**, or refreshing databases and applications. Ensured availability of client production systems and internal instances.
- Installed and configured **OEM** in production and development environments. Managed patching and other databases jobs through OEM.
- experiences with data modeling and deploying new code to production.
- Experience in administering Oracle databases using Oracle Enterprise Manager (OEM), Toad.
- Experience in using Data pump, Flash-Back Recovery, AWR, ASH, ADDM and Recycle Bin.
- Participated in **Disaster Recovery Testing** and documentation.
- Tuned SQL statements using explain plan, query rewrite hints, index hints and using cost-based optimizer.

- **Experience of Performance Tuning** of various aspects of the database using utilities **like AWR, ADDM,**
- Ability to troubleshoot day-to-day problems encountered on production as well as development database environments.
- Basic Linux administration, Shell, Perl scripting.
- Experience with 24**/7 Production databases of multi-GB to TB** and responsible for round-the-clock database operations.

## Technical Skills:

**Database:** ORACLE 23ai,19c, 12c, 11g R2/10g/9i, MS SQL Server, MySQL, PostgreSQL

**Cloud Technologies:**

- Amazon Web Services (AWS): RDS, Aurora, DynamoDB, EC2, S3, Lambda, CloudFormation, Secret
- AWS Database Migration Service (DMS)
- AWS Schema Conversion Tool (SCT)

**Version Control**

- Git
- GitHub, GitLab for repository management and collaboration

**Database Pipeline & Automation**

- CI/CD pipelines for database deployments using Jenkins, GitLab CI, or AWS Code Pipeline
- Database schema migrations with Flyway and Liquibase
- Automated backup and recovery processes
- Infrastructure as Code (IaC) with Terraform for database provisioning.

**Development Tools**

- TOAD Application/DBA Module
- SQL Developer
- Oracle Enterprise Manager (OEM)
- VSCODE
- DBeaver

**Operating Systems**

- Unix (AIX, Solaris), Linux (Red Hat), Windows Server

**Languages**

- SQL, PL/SQL, T-SQL, Shell Scripting, Perl, Python

**Database replication:**

- Oracle Goldengate for real-time data replication and heterogeneous database migrations
- AWS Database Migration Service (DMS) for homogeneous and heterogeneous migrations, including schema conversion and data transfer client production systems and internal instances.

## Professional Experience

### CapitalOne, Remote — Jul 2025 to Aug 2026

**Oracle DBA**

**Responsibilities:**

- Managed oracle **19c,18c, 12c, RAC** in production, Development, and non-production environments.
- Managed oracle databases in amazon cloud (AWS RDS, EC2, DMS, Redshift)
- Managed Exadata cluster.
- Experiences data migration from on-prem to cloud environments.
- Managed oracle enterprise manager (OEM)
- Working experiences on Oracle TDE master wallet encryption to secure financial data.
- Worked cloning and replication procedures, backup and recovery procedures, export/importscripts, data pump scripts.
- Monitoring and maintaining **Oracle Dataguard, physical and logical standby databases** on Production Environment.

- Worked **database upgrade PSU patching** in different database environments.
- Experiences on Oracle table and index partitioning in multi terabytes databases.
- Worked with database **performance tuning** issues.
- Daily DBA activities like Tuning of **SQL/PLSQL**, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Creating and maintaining Flashback database restore points based on user requests.
- Involved with data modeling and deploying new code to production.
- Extensively working with **Unix Kshell, Python** for monitoring database issues and maintains the cronjobs.
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, tkprof, explainplan, statspack, and tuning of initialization parameters.
- Working with data modeling and integrating for new code deployment.

**Discover, Remote** **Jul 2022 to Jun 2025**

**Oracle DBA**

**Responsibilities:**

- Managed oracle **19c,18c, 12c, RAC** in production, Development, and non-production environments.
- Managed 70+ Exadata cluster.
- Managed oracle databases in amazon cloud (AWS RDS, EC2, DMS, Redshift)
- Experiences data migration from on-prem to cloud environments.
- experiences on database **upgrade and migration** with Oracle **12c,18c,19c**
- Managed **snowflakes** databases.
- Managed oracle enterprise manager (OEM)
- Performed **RMAN** backups, restores, cloning or refreshing databases. Ensured Availability of
- Worked cloning and replication procedures, backup and recovery procedures, export/importscripts, data pump scripts.
- Monitoring and maintaining **Oracle Dataguard, physical and logical standby databases** on Production Environment.
- Worked **database upgrade PSU patching** in different database environments.
- Experiences on Oracle table and index partitioning in multi terabytes databases.
- Worked with database **performance tuning** issues.
- Daily DBA activities like Tuning of **SQL/PLSQL**, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Creating and maintaining Flashback database restore points based on user requests.
- Involved with data modeling and deploying new code to production.
- Extensively working with **Unix Kshell, Python** for monitoring database issues and maintains the cronjobs.
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, tkprof, explainplan, statspack, and tuning of initialization parameters.

**Trinet, New York** **Sep 2021 to Jun 2022**

**Senior Oracle DBA**

**Responsibilities:**

- Managed oracle **23ai**,**19c,12c RAC** in production, Development, and non-production environments.
- Managed Exadata 4 Node, 2 Node cluster
- Managed AWS MySQL aurora, PostgreSQL
- Managed MySQL and PostgreSQL databases across AWS RDS, Amazon Aurora (MySQL/Postgres), EC2-hosted databases, and on-prem environments.
- Performed major and minor version upgrades for MySQL and PostgreSQL with minimal downtime, including pre-upgrade compatibility checks, parameter tuning, and post-upgrade validation.
- Led and supported database migrations between on-prem to AWS, EC2 to RDS/Aurora, and cross-engine migrations using native replication, DMS, logical replication, and dump/restore strategies.

- Designed and maintained high availability and disaster recovery setups using multi-AZ, read replicas, Binlog replication, WAL streaming, and automated backups.
- Optimized database performance through query tuning, index optimization, execution plan analysis, and parameter group tuning for production workloads.
- Managed schema changes and data type migrations (e.g., INT → BIGINT) across large, high-volume tables in both staging and production environments.
- Implemented monitoring and alerting using CloudWatch, Performance Insights, slow query logs, and custom dashboards to proactively detect and resolve issues.
- Managed oracle databases in amazon cloud (AWS RDS, EC2, DMS, snowflakes)
- Managed Goldengate for data replication
- Experiences data migration from on-prem to cloud environments.
- experiences on database **upgrade and migration** with Oracle **12c and 19c**
- Managed **snowflakes** databases.
- Managed AWS **Redshift** cluster, including provisioning, scaling, schema design and data load.
- Managed oracle enterprise manager (OEM)
- Performed **RMAN** backups, restores, cloning or refreshing databases. Ensured Availability of client production systems and internal instances.
- Monitoring and maintaining **Oracle Data guard, physical and logical standby databases** on Production Environment.
- Worked **database upgrade PSU patching** in different database environments.
- Installed and configured **OEM** in production and development environments. Managed patching and other databases jobs through OEM.
- Daily DBA activities like Tuning of **SQL/PLSQL**, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Involved with data modeling and deploying new code to production.
- Extensively working with **Unix Shell, Python** for monitoring database issues and maintains the cronjobs.
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, explaining plan and tuning of initialization parameters.

**ViacomCBS, NYC** **Mar 2016 to Jun 2021**

**Senior Oracle DBA**

**Responsibilities:**

- Managed oracle **19c,18c, 12c, 11g, RAC** in production, Development, and non-production environments.
- Managed oracle databases in amazon cloud (AWS RDS, EC2, DMS, Redshift)
- Experiences data migration from on-prem to cloud environments.
- experiences on database **upgrade and migration** with Oracle **10g,11g and 12c,18c,19c**
- Managed **snowflakes** databases.
- Managed oracle enterprise manager (OEM)
- Performed **RMAN** backups, restores, cloning or refreshing databases. Ensured Availability of
- Working experiences on Oracle TDE master wallet encryption to secure financial data.
- Worked cloning and replication procedures, backup and recovery procedures, export/importscripts, data pump scripts.
- Monitoring and maintaining **Oracle Dataguard, physical and logical standby databases** on Production Environment.
- Worked **database upgrade PSU patching** in different database environments.
- Experiences on Oracle table and index partitioning in multi terabytes databases.
- Worked with database **performance tuning** issues.
- Daily DBA activities like Tuning of **SQL/PLSQL**, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Knowledge about oracle shareplex and goldengate.

- Extensively working with **Unix Kshell, Python** for monitoring database issues and maintains the cronjobs.
- Monitoring **SQL Server 2012** both production and non-production environments.
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, tkprof, explainplan, statspack, and tuning of initialization parameters.
- Working with Networked Attached Storage (NAS) & Tivoli Storage Management (**TSM)**
- Working with data modeling and integrating for new code deployment.

**Coach Inc., Carlstadt NJ** **Jan 2015 to Feb 2016**

**Senior Oracle DBA**

**Responsibilities:**

- Managed oracle **12c**, **11g RAC** (4, 2 node) in production, Development and non-production environments.
- Experience on Upgrading **11g to 12c** (both CDB and non-CDB) databases.
- Working in Oracle SAP 11.2.0.4 and 12.1.0.2 in AIX environments with brtools.
- experiences on database **upgrade and migration** with Oracle 10g,11g and 12c
- Experience with **IBM Netezza** in data warehouse system.
- Performed **RMAN** backups, restores, cloning, or refreshing databases and applications. Ensured Availability of client production systems and internal instances.
- Monitoring and planning **ASM** storage in all databases.
- Experience with CISCO TIDAL Enterprise scheduler and AUTOSYS scheduler
- Working experience **Audit Vault, AES Security/Encryption.**
- Worked cloning and replication procedures, backup and recovery procedures, export/importscripts, data pump scripts.
- Worked **database upgrade PSU patching** in different database environments.
- Experiences on Oracle table and index partitioning in multi terabytes databases.
- Worked with database **performance tuning** issues.
- Daily DBA activities like Tuning of **SQL/PLSQL**, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Creating and maintaining Flashback database restore point based on user requests.
- Involved with data modeling and deploying new code to production every week.
- Extensively working with **Unix Kshell** to monitor database issues and maintains the cronjobs.
- Monitoring **OEM 11g** for performance issues and trouble shouting based on errors.
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, tkprof, explainplan, statspack, and tuning of initialization parameters.
- Working with Networked Attached Storage (NAS) & Tivoli Storage Management (**TSM)**
- Working with data modeling and integrating for new code deployment.

**Verizon wireless, Alpharetta GA** **Aug 2014 to Jan 2015**

**Senior Oracle DBA**

**Responsibilities:**

- Managed oracle **11g RAC** (6, 4, 2 node) in production, Development and non-production environments.
- Working with more than 200 databases including production, Development and non-production
- Working on different versions of OS like **AIX, SUN, LINUX**
- experiences on database **upgrade and migration** with Oracle 10g,11g and 12c
- Performed **RMAN** backups, restores, cloning, or refreshing databases and applications. Ensured Availability of client production systems and internal instances.
- Monitoring and planning **ASM** storage in all databases.
- Worked cloning and replication procedures, backup and recovery procedures, export/importscripts, data pump scripts.
- Monitoring and maintaining **Oracle Dataguard** on Production Environments.
- Experiences with Netezza new database creation, data loading, refreshing, backup and recovery and performance tuning

- Crete development environments for application users for testing.
- Experiences on Oracle **table and index partitioning** in multi terabytes databases.
- Daily DBA activities like Tuning of **SQL/PLSQL**, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Knowledge about oracle shareplex and goldengate.
- Creating and maintaining Flashback database restore point based on user requests.
- Involved with data modeling and deploying new code to production every week.
- Extensively working with **Unix Kshell** to monitor database issues and maintains the cronjobs.
- Monitoring **OEM 11g** for performance issues and trouble shouting based on errors.
- Working with various types of tables and index partitioning (like interval, Hash etc.)
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, tkprof, explainplan, statspack, and tuning of initialization parameters.

### AT & T, New jersey — Feb 2010 to Jun 2014

**Oracle DBA**

**Responsibilities:**

- Planning, Implementing and validating various versions of Oracle Databases **10, 11g, oracle RAC**.
- Performed all types of Oracle DBA activities including Installation, configuration, importing/exporting, migration, patch installs capacity planning, backup and recovery of mission critical databases and data files using command line syntax as well as Oracle RMAN, and Performance Tuning of databases.
- Performed Oracle database configuration, monitoring, performance tuning, and patch administration withtwo node **RAC**, ASM and Grid Control environment.
- Working with large database system.
- Involved in installing and Managed **Real Application Clusters (RAC)** 10g and 11g.
- Performed **RMAN backups, restores, cloning**, or refreshing databases and applications. Ensured availability of client production systems and internal instances.
- Monitoring **OEM 11g** for performance issues and trouble shouting based on errors.
- Daily DBA activities like Tuning of SQL/PLSQL, Performance Tuning, Database auditing and Managed usergroups, Database security, OS space monitoring etc.
- Designed and implemented **RMAN** backup policies with automation.
- Monitored and optimized performance of the database, plan for backup and recovery of the database andallocate system storage and plan future storage requirements.
- Analyze statistics **AWR, ASH, ADDM.**
- Performed Import and Export using Oracle Data pump utilities **EXPDP and IMPDP.**
- Performed necessary **ETL** process in data warehouse environments.
- Maintain SQL server 2003 & 2005 in data warehouse environments. Data transfers from SQL server to oracledatabase environments.
- Perform daily operational duties/security for all users of the databases.
- Resolve database performance issues, database capacity issues and other distributed data issues (OLTP).
- Design, document, implement and maintain all disaster recovery procedures which result in no data loss.
- Performance Tuning of various aspects of the database using utilities like AWR, ADDM, tkprof, explain plan, statspack, and tuning of initialization parameters.
- Provide Oracle DBA 24x7 support for multiple large databases in production, development, Stage.

## Education

Bachelor of computer science and engineering.

## Certifications

- Oracle Certified Professional (OCP) (10g, 11g,12c,19c)
- AWS Certified Solutions Architect – Associate
- MYSQL 8.0 Database admin professional.
- Red Hat Linux Certified Engineer (RHCE)
