SENIOR CLOUD DATABASE ENGINEER | DATABASE RELIABILITY ENGINEER

ORACLE • MYSQL • POSTGRESQL • AWS • AURORA • RDS •Redshift •Snowflakes • DMS • TERRAFORM • PYTHON• GIT

Professional Summary

Senior Database Engineer with 16+ years of enterprise database experience across Oracle, MySQL and PostgreSQL, including AWS RDS, Amazon Aurora, EC2, DMS and Redshift. Deep expertise in database architecture, cloud migration and modernization, HA/DR, replication, performance engineering, upgrades, backup/recovery and production reliability. Experienced supporting mission-critical multi-GB to multi-TB environments and partnering with application and platform teams on production delivery.

CORE COMPETENCIES

Database Engineering: Database Architecture • Database Modernization • Database Migration • Schema/Data Migration • Production Reliability •Capacity Planning
Databases: Oracle • PostgreSQL • MYSQL • DocumentDB • Redis cache • Snowflakes • Redshift
Cloud & DevOps: AWS Database Engineering • Aurora • RDS • EC2 • DMS • Infrastructure as Code • Terraform • CI/CD • Git • Liquibase •Automation
Reliability: HA/DR • Replication • Disaster Recovery • Backup/Recovery • Read Replicas • Oracle RAC • Data Guard • GG
Performance: SQL Query Optimization • Indexing • Execution Plans • AWR/ASH/ADDM • Parameter Tuning • Slow Query
Observability: CloudWatch • Performance Insights • OEM • Database Monitoring • Alerting • Grafana • Datadog
Operating Systems: Unix • LINUX • Windows server

SELECTED CAREER IMPACT

- Migrated hundreds of Oracles, MySQL and POSTGRESQL databases from on-premises environments to AWS, including Aurora Global Clusters.
- Managed oracle databases in 70 plus Exadata cluster with all major versions.
- Designed and implemented automated database deployment pipelines using Infrastructure as Code (IaC) and Git-based version control, improving consistency, scalability, and operational efficiency.
- Led and supported database migrations across on-premises to AWS, EC2, RDS/Aurora and cross-engine environments using AWS DMS, Goldengate logical replication and dump/restore.
- Led MySQL/PostgreSQL major and minor upgrades with compatibility assessment, parameter tuning, rollback planning and post-upgrade validation.
- Designed and maintained HA/DR using multi-AZ, read replicas, Binlog replication, PostgreSQL WAL streaming and automated backups.
- Implemented proactive monitoring using CloudWatch, Performance Insights, slow-query logging
- Performed production SQL/query tuning, indexing, execution-plan analysis and database parameter optimization.

CERTIFICATIONS

- MySQL 8.0 Database Administrator – Professional
- Oracle Database Certified Professional – 10g, 11g, 12c, 19c
- Red Hat Certified Engineer (RHCE)
- AWS Certified Solutions Architect – Associate

MySQL & PostgreSQL Expertise

- Hands-on experience managing MySQL and PostgreSQL across AWS RDS, Amazon Aurora (MySQL & PostgreSQL), EC2-hosted databases, and on-prem environments.
- Led major and minor version upgrades for MySQL and PostgreSQL with minimal downtime, including compatibility checks and rollback planning.

- Managed schema evolution and data type migrations (e.g., INT → BIGINT) across high-volume production tables.
- Designed and supported MySQL replication architectures, including Aurora ↔ EC2 replication across multiple AWS accounts.
- Migrated hundreds of MySQL databases from on-prem to AWS, including Aurora Global Clusters.

Oracle Database Expertise

- Managed Oracle 9i, 10g, 11g, 12c, 18c, 19c, and 23ai databases in Production, Development, QA, and DR environments.
- Strong hands-on experience with Oracle RAC (Standalone & Clustered) and Data Guard (Physical & Logical Standby).
- Designed and administered Oracle Goldengate configurations (Active-Active and Active-Passive).
- Performed Oracle database patching, upgrades, cloning, and refreshes using RMAN and Data Pump.
- Implemented Oracle TDE wallet-based encryption to secure sensitive and financial data.
- Installed, configured, and administered Oracle Enterprise Manager (OEM) for monitoring, patching, and job automation.
- Extensive experience with AWR, ASH, ADDM, Flashback Recovery, Recycle Bin, and performance diagnostics.
- Tuned complex SQL using Explain Plan, CBO, hints, AWR reports, TKPROF, and Statspack.

Cloud, Migration & HA/DR

- Strong experience managing databases on **AWS (RDS, Aurora, EC2, DMS, S3, Redshift)**.
- Led and supported **large-scale database migrations**:
    - On-prem → AWS
    - EC2 → RDS / Aurora
    - Cross-engine migrations using **AWS DMS, logical replication, dump/restore**
- Designed and maintained **High Availability and Disaster Recovery** solutions using:

Performance, Monitoring & DevOps

- Proactively monitored and optimized database performance using **CloudWatch, Performance Insights**
- Performed advanced **query tuning, index optimization, execution plan analysis**, and parameter tuning.
- Experience managing **database schema pipelines using Liquibase**.
- Hands-on experience with Git and **infrastructure as code (IaC)** using **terraform**
- Hands-on experience on design microservice architecture.
- Worked closely with application and platform teams to troubleshoot **production incidents**, review changes, and deploy new releases safely.

Professional Experience

TriNet, New York **Sep 2023 to present.**

Senior Database Engineer

Responsibilities:

- Architect and administer enterprise Oracle, MySQL and PostgreSQL platforms across AWS and on-premises environments.
- Manage Amazon Aurora MySQL/PostgreSQL, AWS RDS and EC2-hosted databases supporting production microservices and enterprise workloads.
- Lead and support migrations between on-premises and AWS, EC2 and RDS/Aurora, and cross-engine environments using native replication, AWS DMS, logical replication and dump/restore.
- Perform major/minor MySQL and PostgreSQL upgrades with compatibility assessment, parameter tuning, rollback planning and post-upgrade validation.
- Design and maintain HA/DR using multi-AZ, read replicas, Binlog replication, PostgreSQL WAL streaming and automated backups.
- Optimize production workloads through SQL/query tuning, index optimization, execution-plan analysis and parameter-group tuning.
- Implement monitoring and alerting with CloudWatch, Performance Insights, slow-query logs.
- Manage Oracle 23ai/19c/12c RAC, Data Guard, Goldengate, RMAN, OEM and TDE; perform patching, backup/recovery, cloning and refreshing activities.

- Manage AWS Redshift clusters including provisioning, scaling, schema design and data loading.
- Use Python and Unix Shell for monitoring, issue detection and operational automation; support application/platform teams during incidents and production changes.

Discover, NYC **Jul 2020 to Aug 2023**

Database Administrator

Responsibilities:

- Managed Oracle 19c,12c and 23ai RAC environments across production, development and non-production.
- Managed Oracle databases in AWS using RDS, EC2, DMS and Redshift and supported cloud migration initiatives.
- Managed MySQL and PostgreSQL across AWS RDS, Amazon Aurora and EC2-hosted environments.
- Designed and supported MySQL replication and performed major/minor MySQL and PostgreSQL upgrades with compatibility and rollback planning.
- Supported multiple Exadata cluster in critical prod environments.
- Supported on-premises-to-cloud database migrations and managed Snowflake environments.
- Administered RMAN backup/recovery, cloning/refresh, Data Guard, Goldengate and Oracle Enterprise Manager.
- Implemented Oracle TDE master-wallet encryption to secure financial data.
- Performed Oracle table/index partitioning in multi-terabyte databases and supported SQL/PLSQL and database performance tuning.
- Automated monitoring and operational tasks using Unix Shell and Python; supported SQL Server production and non-production environments.
- Managed DocumentDB in AWS environments.
- Used AWR, ADDM, Explain Plan and initialization-parameter tuning for performance diagnostics.
- Manages Iac to deploy RDS instances across dev, stage and prod environments.
- Designed and supported MySQL replication architectures.
- Managed oracle enterprise manager (OEM)

ViacomCBS, NYC **Mar 2016 to Jun 2020**

Senior Database Administrator

Responsibilities:

- Managed Oracle 19c, 18c, 12c and 11g RAC environments across production, development and non-production.
- Managed Oracle databases in AWS using RDS, EC2, DMS and Snowflakes and supported cloud migration initiatives
- Managed snowflakes databases.
- Managed PostgreSQL across on-prem and cloud environments.
- Managed oracle enterprise manager (OEM)
- Responsible for cloning and replication procedures, backup and recovery procedures, export/import scripts, data pump scripts.
- Performed RMAN backups, restores, cloning or refreshing databases.
- Managed Oracle Dataguard, physical and logical standby databases on Production Environment.
- managed database upgrade and PSU patching in different database environments.
- Closely worked with database performance tuning issues.
- Daily DBA activities like Tuning of SQL/PLSQL, Performance Tuning, Database auditing and managing user groups, Database security, OS space monitoring etc.
- Involved with data modeling and deploying new code to production.
- Extensively worked with Unix Shell, python for monitoring database issues and maintains the cronjobs.
- Managed SQL Server 2012 both production and non-production environments.

Coach Inc., Carlstadt NJ **Jan 2015 to Feb 2016**

Senior Oracle DBA

Responsibilities:

- Managed Oracle 12c and 11g RAC environments across production, development and non-production.
- Managed Oracle SAP 11.2.0.4 and 12.1.0.2 in AIX environments.

- Managed database upgrade and migration with Oracle 10g,11g and 12c
- Experiences on Oracle data loading with external table
- Managed ASM storage in all databases.
- Performed RMAN backups/restores, cloning and refreshes; managed Data Guard, ASM storage and backup/recovery
- Supported Oracle TDE encryption, Audit Vault/AES security, patching, partitioning and performance tuning.
- Supported IBM Netezza data-warehouse environments including database creation, data loading, refresh and performance tuning.
- Used Unix K-shell, OEM, TSM/NAS and scheduling tools for production operations.
- Performed 11g-to-12c upgrades, including CDB and non-CDB databases, and supported Oracle SAP environments on AIX.

Verizon wireless, Alpharetta GA — Aug 2014 to Jan 2015

Senior Oracle DBA

Responsibilities:

- Managed more than 200 production, development and non-production databases across AIX, Solaris and Linux.
- Administered Oracle 11g RAC, Data Guard, RMAN backup/recovery, cloning, replication, ASM storage and database upgrades.
- Performed Oracle partitioning, performance tuning, OEM monitoring and Unix automation for enterprise environments.
- Supported multiple Exadata cluster in critical prod environments.
- Managed MySQL databases including replication.
- Performed multiple database upgrade in Rac and Exadata environments.

AT & T, New jersey — Feb 2010 to Jun 2014

Oracle DBA

Responsibilities:

- Performed all types of Oracle DBA activities including Installation, configuration, importing/exporting, migration, patch installs capacity planning, backup and recovery of mission critical databases and data files using command line syntax as well as Oracle RMAN, and Performance Tuning of databases.
- Planned, implemented and administered Oracle 10g/11g databases and RAC environments supporting mission-critical OLTP systems.
- Designed and maintained Oracle Data Guard environments for disaster recovery and performed installation, configuration, migration, patching and backup/recovery.
- Performed RMAN backup/restore, cloning, Data Pump import/export, capacity planning, storage planning and database performance tuning.
- Administered RAC, ASM and Grid Control/OEM environments and analyzed AWR, ASH and ADDM reports.
- Designed and implemented automated RMAN backup policies and maintained disaster recovery procedures.
- Served as a central point of contact for DBA architecture needs, ensuring databases and systems were built, tested and production ready.
- Supported Unix/Linux/Solaris environments, SQL Server data warehouses and OBIEE backend/database requirements.

Education

Bachelor of computer science and engineering.

SELECTED DATABASE TOOLKIT:

Oracle: RAC • Data Guard • Goldengate • EXADATA• OCI • RMAN • OEM • TDE • AWR • ASH • ADDM • Flashback • Data Pump • Partitioning • ASM • SQL/PLSQL

MySQL: Aurora • RDS • EC2 • Replication • Upgrades • Schema/data-type migrations • Query/index tuning • Slow-query analysis

PostgreSQL: Aurora/RDS/EC2 • Upgrades • WAL streaming • Logical replication • Backups • index tuning • Parameter optimization

Analytics: RedShift, Snowflakes

Cloud/Migration: AWS DMS • SCT • RDS • Aurora Global Clusters • EC2 • Redshift • S3 • CloudWatch • Performance Insights
